

Product Requirements Document (PRD)

Mudra Tube Admin Panel (/admin-penel-29devs)

Project Name: Mudra Tube (29 Devs) **Document Version:** 1.0 **Target Module:** Secure Administrative Control Panel

1. Introduction & Objective

The objective of this PRD is to define the requirements for a secure, centralized **Admin Panel** for the Mudra Tube Telegram WebApp. This panel will be hosted on a hidden, secure route (/admin-penel-29devs) protected by single-credential authentication. It will allow the administrator to manage user balances, process multi-mode payouts (UPI & TON/USDT), configure platform limits, and moderate/manage channel promotion campaigns (both custom requests and pre-defined admin packages).

2. Authentication & Route Security

- **Hidden URL Route:** The admin panel must be accessible *only* via the specific path: yourdomain.com/admin-penel-29devs. It must not be indexed by search engines or linked publicly on the main user interface.
- **Single Admin Login:**
 - A lightweight authentication gate requiring a single **Username** and **Password** (stored securely using hashed environment variables or secure local configuration).
 - Session management (using JWT or secure HTTP-only cookies) to keep the admin logged in safely.

3. Core Functional Requirements

3.1 Platform Settings & Global Controls

The admin must be able to configure core economic parameters of the mini app dynamically from the dashboard:

- **Minimum Withdrawal Limit:** Set the threshold (e.g., 300 Coins = ₹1.00). Users cannot request a payout below this limit.
- **Coin Conversion Rate:** Define how many coins equal 1 INR or 1 TON.
- **Global Feature Toggles:** Enable/disable specific task modules (e.g., temporarily pausing CPA or Channel Join tasks).

3.2 User Data & Balance Management

- **User Search & List:** View a table of all registered users (user_id, username, current coin balance, completed tasks count, join date).
- **Manual User Addition/Editing:**

- Add a new user manually or modify an existing user's coin balance (add/deduct coins).
- View a user's transaction and task history.

3.3 Withdrawal & Payout Management

The platform must support dual payout systems (Fiat UPI and Crypto TON/USDT via TonKeeper).

- **Withdrawal Requests Table:** Displays all requests with user details, amount, requested payout method, and current status.
- **Status Workflow (pending → completed / rejected):**
 - **Pending:** Default state when a user submits a withdrawal request.
 - **Completed:** Admin marks it as paid after transferring funds via UPI or TonKeeper. This triggers a notification/log update.
 - **Rejected:** Admin rejects invalid requests (e.g., wrong UPI ID or cheating), and coins are optionally refunded to the user's balance.
- **Payout Method Support:**
 - **UPI:** Displays user's UPI ID (e.g., name@paytm) for manual or automated processing.
 - **TON / USDT (TonKeeper):** Displays the user's TON/USDT wallet address for crypto payouts.

3.4 Channel Promotion System (Ad Campaign Management)

Allow external channel admins or sponsors to request promotional campaigns through a submission workflow.

- **Channel Request Submission (by Channel Admins):**
 - Channel admins submit a request containing: Channel Username/Link, Required Members count, and Cost Per Member budget.
- **Admin Moderation & Approval Flow:**
 - All incoming requests appear in the Admin Panel under a "Pending Promotions" tab.
 - Admin reviews the request, sets the **Per Member Cost** (fixed by admin if needed), and clicks **Approve** or **Reject**.
 - Once approved, the channel promotion task automatically goes live inside the Mini App for users to complete and earn coins.

3.5 Promotional Packages Management

To make it easier for channel sponsors, the admin can create pre-packaged bundles.

- **Package Creation Builder:** Admin can create, edit, or delete packages (e.g., *Starter Pack: 500 Members for ₹1,000, Growth Pack: 2000 Members for ₹3,500*).
- **Selection by Channel Admins:** When channel admins apply for promotion, they can either choose a pre-defined package or submit a custom requirement, which then routes to the admin for approval.

4. Summary Table of Admin Panel Modules

Module Name	Key Actions / Capabilities	Data Stored / Affected
Auth Gateway	Login via single username/password at /admin-penel-29devs	Session Token / Cookie
Settings Control	Set min withdrawal limits, conversion ratios	Global Config Document in DB
User Management	View users, add/edit balances, view activity	users collection
Withdrawal Hub	Review, filter, change status (pending/completed/rejected) for UPI & TON payouts	withdrawals collection
Channel Moderation	Approve/reject external channel promotion requests, set per-member costs	promotions collection
Package Builder	Create/edit promotional tiers (e.g., Member bundles)	packages collection

5. Next Steps for Implementation

1. **Frontend Route Protection:** Set up the route /admin-penel-29devs in the web app framework to render a secure login view if unauthenticated.
2. **Database Collections Setup:** Ensure Firestore collections for users, withdrawals, promotions, and packages are structured to support these CRUD operations.
3. **UI/UX Design:** Build a clean, responsive dark-mode or light-mode dashboard table layout optimized for quick mobile/desktop management by the admin.
